SUMMARY

Senior frontend engineer with 7 years building **high-performance React and TypeScript web apps** where speed and correctness matter, from technical design through rollout and on-call. At Indeed I owned the post-apply experience for a **site serving 680M+ job seekers**, tech-led a **shared component library adopted by 5 teams**, and set the testing and tooling bar the team built on; at IBM I **cut a JS bundle from 6 MB to 300 KB**. On my own time I built **Glassgrid**, a canvas data grid and linked charts that **scroll 10M rows at 60 fps**, the same rendering problems a real-time trading UI has to solve.

EXPERIENCE

Senior Software Engineer · Indeed | San Francisco, CA — Dec 2024 – Jun 2026
Software Engineer II — *Aug 2022 – Dec 2024*

- Owned the responsive **post-apply flow** (React, TypeScript, Redux) on a site serving **680M+ job seekers** across mobile and desktop browsers, end to end: technical design, **web performance**, accessibility, rollout and maintenance. Turned ambiguous goals into scoped milestones with Product, Design and Analytics; shipped **A/B tests behind feature flags** and **cut Time to Interactive 15%**.
- Co-authored the **RFC** for the shared React/TypeScript component library behind **OneHost, Indeed's micro-frontend platform**; designed its component APIs and drove it through architecture review, then **led 6 engineers as tech lead** through design tokens, Storybook and CI/CD to production. **20+ components adopted by 5 product teams; mentored ~12 engineers (3 promoted)**.
- Built the governed integration layer that lets an LLM agent in Slack call internal platform APIs over MCP with **streamed responses over SSE** (Java, Spring WebFlux), **re-authorizing every call against user entitlements**; **cleared security review for applicant PII**.
- Set the team's quality and reliability bar: gated **Jest, Vitest, React Testing Library and Cypress** in CI, built **Datadog RUM monitors and alerts against SLOs**, and shared **on-call and incident response**.
- Improved developer experience by piloting and rolling out **Claude Code and Codex** with a review-first workflow (scoped context, every generated change reviewed and validated by per-PR tests) and the onboarding docs behind it, **cutting ticket-to-merged-PR time 10%**.

Software Engineer II · IBM | San Francisco, CA — Sep 2021 – Aug 2022
Software Engineer — *May 2019 – Sep 2021*

- **Led the React side of moving developer.ibm.com** off legacy PHP/Angular to Go and React; rebuilt the Webpack build to **cut the JS bundle from 6 MB to 300 KB**, with **2× faster builds and 29× faster hot reload**, reclaiming 20+ engineer-hours a week.
- Designed the GraphQL schema and PostgreSQL data model and built the **GolfTV Apollo GraphQL API (Node.js, AWS)** for a **sports video-streaming service's worldwide launch**; tuned queries for launch traffic and **cut response time 30%** with CDN caching.

Software Engineer Intern, Mobile Applications · J.B. Hunt Transport | Fayetteville, AR — Sep 2018 – Nov 2018

- Moved user experiences to **React Native** on cross-platform, **real-time logistics apps**; wrote **Jest** unit and **Appium** E2E tests.

PROJECTS

Glassgrid · kalebkougl-portfolio.vercel.app/glassgrid (live) · github.com/Kaleb-kougl/glassgrid · TypeScript · React 19 · WebGL · DuckDB-WASM

- Data app with a **virtualized canvas grid** and cross-filtering charts over multi-GB files. Chose the in-house grid over **TanStack Table + Virtual** in a written build-vs-buy; it holds **16.7 ms p95 frames (60 fps) scrolling 10M rows** with flat memory, using an LRU page cache, scaled scroll mapping past Chromium's height limit and an ARIA grid mirror for screen readers.
- Query engine runs **off the main thread in a Web Worker**; pre-aggregated cross-filter cubes cut engine p95 from **963 to 87 ms**, so a brush repaints 4 charts and the grid at **80.5 ms p95**. 25 Zod-typed commands with Immer-patch undo, a **253 kB first-load JS budget**, and **800+ tests in CI on 3 OSes**.

Portfolio & JD fit checker · kalebkougl-portfolio.vercel.app · Next.js 16 · React Server Components · MCP · WebGPU

- Rate-limited **MCP API** feeding a chat UI, plus an opt-in **on-device LLM** with a deterministic fallback. CI gates **137 Playwright E2E tests** (axe, visual regression), **Safari, iPhone and Firefox runs**, **Core Web Vitals on a throttled phone** and a JS budget.

SKILLS

Frontend: TypeScript · JavaScript · React 19 · Next.js · React Server Components · React Native · HTML5 · CSS3 · responsive layout · cross-browser
Real-Time & Data-Dense UI: virtualization · Canvas 2D · WebGL · Web Workers · SSE streaming · Apache Arrow · Redux · Immer · Zod
Architecture & DX: component API design · design tokens · Storybook · micro-frontends · Webpack · Vite · pnpm workspaces · ESLint · CI/CD
Performance & Reliability: Core Web Vitals · JS budgets · bundle optimization · Datadog RUM · SLOs · on-call · A/B tests · feature flags
Testing & Quality: Jest · Vitest · React Testing Library · Playwright · Cypress · property tests (fast-check) · visual regression · axe
APIs & AI: Node.js · REST · GraphQL (Apollo) · Java (Spring WebFlux) · Go · PostgreSQL · AWS · Docker · Claude Code · Codex · MCP

EDUCATION

B.S. Biological Sciences, University of Arkansas · Cum Laude, 3.9 GPA — 2017
2.5 years as an NSF/FDA-funded research assistant · published in Analytical Chemistry (ACS), 2019
Certificate, Full-Stack Web Development, Northwestern University · Node.js, JavaScript — 2019
