SUMMARY

Senior frontend engineer with 7 years building production React and TypeScript apps, owning projects from scoping and technical design through release and on-call. At Indeed I owned the **post-apply experience for a site serving 680M+ job seekers**, turning complex multi-step workflows into scoped milestones with Product and Design, and **co-authored the RFC for a shared design-system component library adopted by 5 teams**. I build fast, reliable UIs: I **cut Time to Interactive 15%** at Indeed and **a JS bundle from 6 MB to 300 KB** at IBM, and built Glassgrid: **a 10M-row grid scrolling at 60 fps and linked charts cross-filtering in <100 ms**, the data-dense reporting advertisers use.

EXPERIENCE

Senior Software Engineer · Indeed | San Francisco, CA — Dec 2024 – Jun 2026
Software Engineer II — *Aug 2022 – Dec 2024*

- Owned the **responsive, multi-step post-apply flow** (React, TypeScript, Redux, CSS) on a site serving **680M+ job seekers**, with **conditional fields and steps driven by prior answers and employer config**, end to end: **scoped requirements with Product, Design and Analytics**, wrote the technical design, carried it through **testing, accessibility, release and maintenance** with runbooks; shipped **A/B tests behind feature flags** and **cut Time to Interactive 15%**.
- Co-authored the **RFC** for the React/TypeScript **design-system component library** behind OneHost, Indeed's micro-frontend platform; paired with designers to map Figma components and tokens to React APIs and drove it through architecture review. Shipped **20+ reusable components** via Storybook and CI/CD, including employer-facing scheduling and availability components, **adopted by 5 teams**.
- **Tech lead for 6 engineers** taking the library to production; **mentored ~12 engineers via pairing and code review (3 promoted)**.
- Set the team's quality and reliability bar: gated **Jest, Vitest, React Testing Library and Cypress** unit, integration and E2E suites in **CI**; built **Datadog RUM monitors and alerts against SLOs** to catch regressions; shared **on-call and incident response**.
- Partnered with backend and platform engineers to build the governed **integration layer** that lets an LLM agent in Slack call internal platform APIs over MCP with **streamed responses over SSE** (Java, Spring WebFlux), **re-authorizing every call against user entitlements**; **cleared security review for applicant PII**.
- Piloted and rolled out **Claude Code and Codex** with a review-first workflow (scoped context, every generated change reviewed and validated by per-PR tests) and onboarding docs, **cutting ticket-to-merged-PR time 10%**.

Software Engineer II · IBM | San Francisco, CA — Sep 2021 – Aug 2022
Software Engineer — *May 2019 – Sep 2021*

- **Led the React side of moving developer.ibm.com off legacy PHP/Angular to Go and React**; rebuilt Webpack to **cut the JS bundle from 6 MB to 300 KB**, **2× faster builds** and **29× faster hot reload**, **saving 20+ engineer-hours a week**.
- Designed the GraphQL schema and PostgreSQL data model and built the **GolfTV Apollo GraphQL API** (Node.js, AWS) for a **sports video-streaming service's worldwide launch**; **cut response time 30%** with CDN caching.

Software Engineer Intern, Mobile Applications · J.B. Hunt Transport | Fayetteville, AR — Sep 2018 – Nov 2018

- Moved user experiences to **React Native** on cross-platform, real-time logistics apps; wrote **Jest** unit and **Appium** E2E tests.

PROJECTS

Glassgrid · kalebkougl-portfolio.vercel.app/glassgrid (live) · github.com/Kaleb-kougl/glassgrid · TypeScript · React 19 · DuckDB-WASM

- Data-exploration app with a **virtualized canvas grid and cross-filtering charts**. Chose a custom grid over TanStack Table in a **written build-vs-buy**; it holds **60 fps (16.7 ms p95 frames) scrolling 10M rows**, with an **ARIA grid mirror for screen readers**.
- Query engine runs in a **Web Worker**; pre-aggregated cubes **cut engine-bench p95 from 637 to 87 ms** at 10M rows; in the app, a brush repaints **4 charts + grid in 80.5 ms p95**. **TDD**, **800+ tests in CI on 3 OSes**.

Portfolio & JD fit checker · kalebkougl-portfolio.vercel.app · Next.js 16 · React Server Components · MCP · WebGPU

- Chat UI over a rate-limited **MCP API**, plus an opt-in **on-device LLM** with a deterministic fallback. CI gates **137 Playwright E2E tests** (axe, visual regression), **Safari, iPhone and Firefox runs, Core Web Vitals on a throttled phone and a JS budget**.

SKILLS

Frontend: TypeScript · JavaScript · React 19 · Next.js · React Server Components · Redux · Angular · HTML5 · CSS3 · responsive layout · cross-browser
Design Systems & Accessibility: reusable component APIs · Storybook · design tokens · Figma Dev Mode · micro-frontends · ARIA · axe
Performance & Reliability: Core Web Vitals · JS budgets · bundle optimization · virtualization · Web Workers · Datadog RUM · SLOs · on-call
Testing & Code Quality: TDD · Jest · Vitest · React Testing Library · Cypress · Playwright · visual regression · CI/CD · code review · RFCs
Full Stack & APIs: Node.js · Express · REST · GraphQL (Apollo) · Java (Spring WebFlux) · Python (FastAPI) · PostgreSQL · AWS · Docker
Delivery & Tooling: feature flags · A/B tests · data visualization · Webpack · Vite · ESLint · Claude Code · Codex · Cursor · MCP

EDUCATION

B.S. Biological Sciences, University of Arkansas · Cum Laude, 3.9 GPA — 2017
2.5 years as an NSF/FDA-funded research assistant ·published in Analytical Chemistry (ACS), 2019
Certificate, Full-Stack Web Development, Northwestern University · Node.js, JavaScript — 2019
